

Dear Prospective Waterjetter,

Thank you for considering Jet Edge. We would like to invite you to come see our company and equipment in St. Michael, MN. We are located just 45 miles from the international airport in Minneapolis, MN. Jet Edge will be happy to reimburse the expense of your flight with the purchase of a Jet Edge waterjet system (reimbursement up to \$1,000).

Jet Edge is one of the few waterjet OEMS that manufacture both the pump and the cutting system. Jet Edge has been producing waterjet equipment since 1984. This makes us one of the oldest manufacturers of UHP waterjets in the world.

Waterjet pumps are the "Heart and Soul" of your waterjet system. Jet Edge offers more than 25 types of intensifier pumps, diesel and electric. Horsepower ranges from 30hp to 280hp. Pressures are available up to 90,000psi (6,200 bar).

Industrial Cutting Systems

All Jet Edge cutting systems are built using industrial-grade components and are built for multiple cutting head 24/7 operation. Most competitors make the same claim but typically use consumer-grade components. Typically a look at the machine's computer will tell you if you are buying industrial-grade equipment. Industrial-grade computer means industrial-grade equipment. Consumer-grade electronics equal consumer-grade equipment.

Try Before You Buy!

We offer free test cuts to all potential customers (customers supply material) to ensure that Jet Edge equipment can meet your cutting requirements. We also can provide competitively-priced cutting services to you as you prepare for your equipment purchase and system installation. This gives you the opportunity to program, train and get business prior to purchasing!

Thanks again for considering Jet Edge.

Sincerely,

A handwritten signature in blue ink that reads "Jude J. Lague".
